EDUCATION

Vellore Institute of Technology

B. Tech, Computer Science and Engineering — CGPA: **9.43**

Vellore, TN

2023 – 2027

EXPERIENCE

TDP Intern

June 2026 – August 2026

Optum (UHG)

- Engineered a **multi-agentic pipeline** for legacy code re-engineering from COBOL to PySpark/Java, accelerating migration velocity by **99%** (from 2 months down to 4–5 hours/process) with **95% conversion accuracy** and **30%+ token savings**.
- Optimized **Azure Databricks** job clusters and intermediate Parquet storage, slashing job execution runtime by **95%** (from 1.5 hours to 3–5 min) across production pipelines handling **hundreds of millions of records**.
- Architected and deployed a secure full-stack microproduct (**Java Spring, React, PostgreSQL**) to **Azure Kubernetes Service (AKS)** via GitHub Actions CI/CD in **3 weeks**, integrating enterprise OAuth/auth standards.
- Showcased technical demonstrations to C-suite leadership, including the **VP of Software Engineering** and **CIO of OptumRx**.

Flutter Developer Intern

May 2025 – June 2025

AstroRaaq

- Built and shipped core iOS features (UPI payments, service bookings, article publishing) that enabled the app's first launch, reaching **100+ downloads in the first 2 weeks**.
- Developed and integrated **REST APIs**, boosting feature reliability and reducing failed backend requests by **30%** during testing.

Senior Core Committee member

March 2025 – December 2025

IEEE-CS, VIT Vellore Chapter

- Contributing to development of Echo, a cross-platform real-time communication app (React Native, Express.js, Nativewind) **targeting 100+ student users**.
- Designed navigation flows and reusable UI components, participated code reviews and Postman API validation, raising code quality and reducing integration bugs

PROJECTS

DocQuery | *Next.js, LangChain, Supabase, OpenRouter*

- Developed a full-stack RAG system handling PDFs, CSVs, and Docx files, enabling ingestion of **10,000+ documents** into a **Supabase vector DB**.
- Implemented a LangChain-powered chatbot answering **over 80% of queries factually** with context retrieval.

AI Research Agent | *LangGraph, LangChain, Python, OpenRouter, BrightData API*

- Built a **multi-source AI research agent** using LangGraph and LangChain, orchestrating parallel queries to Google, Bing, and Reddit, then using **web scraping** and **API integration** to retrieve search results, Reddit threads, and post-level discussions.
- Designed a **graph-based workflow** to analyze and synthesize search results with LLMs (via OpenRouter) into coherent, user-friendly responses.
- Applied structured LLM outputs for filtering relevant Reddit URLs and extracting **high-signal community insights**.

TECHNICAL SKILLS

Languages: Java, Python, C, C++, SQL, PostgreSQL, JavaScript, TypeScript

Frameworks: Spring Boot, React.js, Next.js, Node.js, Express.js, React Native, Flutter, TailwindCSS, Bootstrap

AI/ML & Big Data: PySpark, LangChain, LangGraph, Google ADK, HuggingFace, OpenAI API

Developer Tools & Platforms: Azure Databricks, GCP, Git, GitHub, Supabase, Firebase
